Experience

Full Stack Developer (MERN and Android) | Team Pumpkin, Remote

November 2024 – Present

E-commerce Platform

- Devised a dynamic QR code system for app sharing with platform-aware redirection, improving install conversion by an estimated 30%.
- Designed and implemented responsive product pages and foundational cart architecture, including real-time pricing logic to support thousands of SKUs and dynamic user interactions.
- Streamlined a state-consistent cart system with synchronized updates across the app — handling product quantity modifications, location-based shipping calculations, coupon discounts, and ensuring all price changes propagate accurately in real time on relevant views.
- Developed scalable search, filtering, and pagination systems with dynamic AI-driven translation using the OpenAI API, enabling multi-language support across 8+ locales.
- Technologies:** Next.js, TypeScript, NestJS, REST API, Tailwind, Zustand, ShadCN UI, Radix UI

Friendship & Events App

- Spearheaded the development of a cross-platform mobile and web app used to connect users by personality and location, targeting a launch audience of 10K+ users.
- Engineered a robust chat system with full WhatsApp-like functionality, including text/audio/video messaging, file sharing, and end-to-end encrypted voice/video calls — supporting up to 50 concurrent sessions.
- Built separate merchant and admin dashboards under a unified domain, with role-based access and JWT-secured endpoints. Implemented fine-grained sub-role permissions to control feature access.
- Implemented Stripe payment integration with separate onboarding workflows for merchants and users, enforcing feature restrictions until setup is complete to ensure compliance and secure payment flow.
- Integrated custom transactional email using modular templates, enhancing email delivery efficiency by 40%.
- Optimized database queries and caching strategies, reducing API response time by ~40% and minimizing redundant network calls across high-traffic views.
- Enabled event creation, user group targeting, personality-based matching, support ticket resolution, and content moderation for 100+ test merchants/admins.
- Technologies:** React Native (Expo), Tailwind, Next.js, TypeScript, NestJS, Google API, REST API, Zustand

Assistant Systems Engineer | Tata Consultancy Services, Kolkata

February 2021 – July 2022

Global EdTech Publishing & Content Delivery Platform

- Designed and developed the UI of a Digital Asset Library. Increased readability and responsiveness using CSS. Applied a mobile-first approach, increasing traffic by 25%.
- Created React components to store metadata, access details, and media. Implemented API CRUD calls.
- Increased page load speed by 20% through optimized React components and CSS adjustments.
- Technologies:** OTMM DAL, HTML, CSS, JavaScript, React.js, REST API, SQL

Skills

- Frontend:** HTML, CSS, JavaScript, TypeScript, React.js, Next.js, React Native (with Expo)
- Backend & APIs:** Node.js, Express.js, NestJS, RESTful APIs, Socket.IO, Google APIs
- Database and Data Visualization:** MongoDB, Chart.js, react-leaflet
- State Management:** Zustand, Redux, Context API
- UI Libraries:** Tailwind CSS, ShadCN UI (built on Radix UI), Material UI, Gluestack UI
- Version Control:** Git, GitHub, GitHub Desktop
- Others:** Responsive Web Design, Mobile first Development, Data Structures and Algorithms, JWT, NPM

Education

Bachelor of Technology(B.Tech) | DGPA: 8.80

July 2016 – May 2020

Maulana Abul Kalam Azad University of Technology | Stream: Computer Science and Engineering
